May 2026

Week 1 (07-02-2026):

Project A – CRM Commercial Operations (Transition Phase)

Overview

This week focused on onboarding into the Commercial Operations (Comm Ops) structure of an enterprise CRM system. The project is currently in a transition phase where responsibilities for multiple European country operations will gradually be handed over to our team.

Key Activities

1) Understanding Local CRM Landscapes (EU Region)
Studied country-specific CRM configurations.
Analyzed differences in approval workflows, user hierarchies, and reporting structures.
Attended knowledge transfer sessions to understand:

- Local business processes
- Territory alignment logic
- Governance structure
- Data ownership and compliance mechanisms
  Documented variations across regions to prepare for eventual operational takeover.

2) Observation of Operational Processes
Shadowed ongoing Comm Ops workflows.
Reviewed change request lifecycle from submission to deployment.
Observed incident resolution processes and ticket categorization.
Studied user access provisioning and deactivation protocols.
Understood escalation matrices and SLA monitoring.

3) Documentation and Configuration Review
Reviewed Standard Operating Procedures (SOPs).
Studied permission set architecture and role hierarchy.
Analyzed object structures, record types, page layouts, and field-level security.
Explored sandbox environments to understand configuration dependencies.

4) Risk Awareness During Transition
Identified potential transition risks such as:
i) Country-specific custom logic
ii) Reporting discrepancies

iii) Configuration dependencies
Began compiling structured notes to assist smoother transition.

Project B – Veeva CRM & Vault Implementation Support

Overview - This week focused on foundational configuration activities within Veeva CRM and Vault to support system implementation and structured access governance.

Key Activities

1) User Creation and Role Structuring
Created users aligned with defined business roles within Veeva CRM.
Configured profiles based on functional responsibilities.
Ensured appropriate object access and field visibility.
Structured user hierarchy to reflect reporting relationships.

2) Permission Set Design
Designed modular permission sets within CRM.
Applied principle of least privilege.
Segregated access to maintain scalability and security.
Tested access behavior through role-based login validation.

3) Access and Visibility Testing
Validated CRUD permissions.
Verified page layout visibility.
Ensured backend security configuration aligns with expected system behavior across CRM and Vault components.

Week 1 Learning Outcomes

Project A- Developed understanding of enterprise CRM governance models.
Learned how localized CRM systems operate within a global framework.
Gained exposure to transition management processes.
Improved ability to analyze operational documentation and configuration logic.

Project B - Strengthened knowledge of CRM access architecture.
Understood importance of scalable permission structuring.
Gained practical exposure to role-based system validation.
Improved backend security testing discipline within Veeva CRM environments.

Week 2 (14-02-2026):

Project A – CRM Commercial Operations (Deep Dive Phase)

Overview

The second week involved deeper exposure to operational readiness activities in preparation for system takeover.

Key Activities

1. Knowledge Transfer Workshops
Participated in structured sessions covering:

- Incident triaging
- SLA adherence
- Escalation frameworks
- Change management lifecycle
  Studied historical change request examples to understand approval dependencies and risk assessment processes.

2. Multi-Country System Mapping
Compared CRM implementations across regions.
Documented variations in:

- Call reporting mechanisms
- Validation rules
- Territory logic
- Approval routing structures
  Identified areas that may require harmonization during transition.

3. Compliance and Governance Understanding
Observed how compliance and audit trails are maintained.
Understood impact assessment processes before configuration changes.
Reviewed data governance controls and monitoring frameworks.

4. Operational Readiness Preparation
Structured transition documentation.
Identified open clarification points.
Prepared internal notes for smoother handover support.

Project B – Veeva CRM & Vault Implementation

Overview - This week focused on backend configuration and data structuring within Veeva CRM and Vault to support system implementation.

Key Activities

1. Data Palette Configuration
Created structured data palettes to support CRM modules.
Configured dynamic dropdown dependencies.
Ensured role-based data visibility logic.
Maintained consistent data formatting standards.

2. Backend–System Alignment
Validated field types and picklist dependencies.
Ensured mandatory field logic aligns with process requirements.
Structured objects for seamless interaction across CRM and Vault components.

3. Testing Data Flow
Tested record creation and update flows.
Validated validation rules.
Ensured data consistency across user roles.

4. Scalability Considerations
Designed modular data structures.
Avoided hardcoded configurations.
Planned structure for future enhancement and performance stability.

Week 2 Learning Outcomes

Project A- Gained exposure to structured CRM transition management.
Improved understanding of ticket triaging and SLA handling.
Strengthened system mapping and documentation skills.
Developed awareness of governance and compliance-heavy CRM environments.

Project B - Gained hands-on experience in backend preparation within Veeva CRM and Vault.
Understood importance of structured data architecture in enterprise systems.
Improved ability to align backend configuration with process requirements.
Strengthened validation and integration testing skills.
Developed scalable thinking during early-stage system design.

Week 3 (21-02-2026)

Project A – CRM Commercial Operations (Transition & Shadow Phase)

Overview

This week focused on continued transition calls and operational readiness. One country transition is nearing completion, and shadow support is about to begin.

Key Activities

1. Continued Transition Calls
Participated in detailed transition discussions.
Clarified operational workflows and configuration dependencies.
Reviewed final handover checkpoints for one country.

2. Pre-Shadow Preparation
Prepared documentation for active shadowing phase.
Reviewed open incidents and pending change requests.
Aligned understanding of SLAs and escalation protocols.

3. Process Alignment
Ensured configuration aligns with defined business workflows.
Validated integration points between CRM and Vault components.

Project B – Veeva CRM & Vault Enhancement Activities

Overview

This week focused on continued refinement of CRM configuration and enhancement of implementation components.

Key Activities

1. Configuration Refinement
Reviewed existing permission structures.
Optimized access visibility for improved governance control.

2. Learning Key CRM Functional Modules
Studied Rep Triggered Emails (RTE) configuration and workflow logic.
Understood email approval processes and tracking mechanisms.
Explored sampling management processes within Veeva CRM.

3. Sampling Implementation (Initial Stage)
Started configuring sampling functionality in Veeva CRM.
Reviewed product allocation rules and compliance considerations.
Tested sampling-related record flows in sandbox.

Week 3 Learning Outcomes

Project A

Gained hands-on exposure to near-live transition readiness.
Developed understanding of Rep Triggered Emails configuration logic.
Learned sampling process implementation within Veeva CRM.
Improved confidence in shadow support preparation and operational ownership.

Project B

Strengthened configuration refinement skills within enterprise CRM systems.
Improved governance-focused system validation approach.
Enhanced understanding of CRM–Vault integration dynamics.

Week 4 (28-02-2026):

Project A - CRM Commercial Operations (Shadow Phase Initiation)

Overview

This week marked the beginning of active shadowing for one country as part of the CRM transition process. Focus was on understanding live operational workflows, manual upload processes, and documenting the existing AS-IS state. Transition activities for other countries continued in parallel.

Key Activities

1. Shadowing Sessions
Started structured shadow support for one country.
Observed end-to-end operational handling of CRM activities.
Understood real-time issue handling and workflow execution.

2. Manual Upload & Data Change Activities
Observed manual upload processes within the system.
Covered four key data change activities including validation and approval checks.
Understood data dependencies and impact on reporting structures.

3. AS-IS Documentation Preparation
Prepared detailed AS-IS document outlining current operational processes.
Documented workflows, dependencies, approval steps, and validation mechanisms.
Ensured structured representation for smoother knowledge retention and future optimization.

4. Continued Transition Support
Participated in transition calls for remaining countries.
Clarified open configuration and process-level queries.

Project B - Veeva CRM Implementation & Configuration

Overview

This week focused on refining access governance and exploring functional modules within Veeva CRM.

Key Activities

1. Permission Set Enhancement
Configured additional permission sets based on evolving requirements.
Validated role-based access alignment with process needs.
Tested visibility and access control across modules.

2. Sampling Module Exploration
Further explored sampling functionality within Veeva CRM.
Reviewed sampling workflows, compliance requirements, and allocation logic.
Tested initial configuration behavior in sandbox.

Week 4 Learning Outcomes

Project A

Gained practical exposure to live operational shadowing.
Developed understanding of manual upload dependencies and data validation impacts.
Improved process documentation skills through AS-IS preparation.
Strengthened readiness for gradual operational ownership.

Project B

Enhanced expertise in permission architecture refinement.
Developed a deeper understanding of sampling configuration logic.
Improved ability to align system access controls with business requirements.

Week 5 (07-03-2026):

Project A - CRM Commercial Operations (Transition Continuation)

Overview

This week focused on continuing transition activities and gradually preparing for active system involvement. Efforts were directed toward understanding ongoing workflows, initiating access setup, and contributing to internal documentation and presentation materials.

Key Activities

1. Continued Transition Calls
Participated in ongoing transition sessions for multiple regions.
Reviewed operational workflows and clarified process-level dependencies.
Strengthened understanding of CRM operations and transition structure.

2. Access Initiation
Started working towards obtaining required system access.
Understood access request processes and approval workflows.
Reviewed role-based access requirements within the CRM system.

3. Documentation & Deck Preparation
Worked on preparing internal presentation decks related to CRM processes.
Structured information for better understanding of workflows and configurations.

Project B - Veeva CRM Implementation & Configuration Support

Overview

This week involved continued exposure to CRM configuration and supporting activities related to system understanding and documentation.

Key Activities

1. CRM System Familiarization
Explored system components and configuration areas.
Aligned understanding with ongoing implementation requirements.

2. Supporting Documentation Activities
Contributed to preparation of structured decks for internal understanding.
Reviewed configuration-related information and workflows.

Week 5 Learning Outcomes

Project A

- Improved understanding of transition workflows and operational dependencies.
- Gained clarity on access management processes within enterprise CRM systems.
- Enhanced ability to structure and present technical information through documentation.

Project B

- Strengthened familiarity with CRM system components and configuration areas.
- Improved documentation and presentation skills in a technical context.
