# Week 1 (07-02-2026):

# Project A – CRM Commercial Operations (Transition Phase)

## Overview

This week focused on onboarding into the Commercial Operations (Comm Ops) structure of an enterprise CRM system. The project is currently in a transition phase where responsibilities for multiple European country operations will gradually be handed over to our team.

## Key Activities

1) Understanding Local CRM Landscapes (EU Region)
Studied country-specific CRM configurations.
Analyzed differences in approval workflows, user hierarchies, and reporting structures.
Attended knowledge transfer sessions to understand:

- Local business processes
- Territory alignment logic
- Governance structure
- Data ownership and compliance mechanisms
  Documented variations across regions to prepare for eventual operational takeover.

2) Observation of Operational Processes
Shadowed ongoing Comm Ops workflows.
Reviewed change request lifecycle from submission to deployment.
Observed incident resolution processes and ticket categorization.
Studied user access provisioning and deactivation protocols.
Understood escalation matrices and SLA monitoring.

3) Documentation and Configuration Review
Reviewed Standard Operating Procedures (SOPs).
Studied permission set architecture and role hierarchy.
Analyzed object structures, record types, page layouts, and field-level security.
Explored sandbox environments to understand configuration dependencies.

4) Risk Awareness During Transition
Identified potential transition risks such as:
i) Country-specific custom logic
ii) Reporting discrepancies

iii) Configuration dependencies
Began compiling structured notes to assist smoother transition.

# Project B – Veeva CRM & Vault Implementation Support

Overview - This week focused on foundational configuration activities within Veeva CRM and Vault to support system implementation and structured access governance.

## Key Activities

1) User Creation and Role Structuring
Created users aligned with defined business roles within Veeva CRM.
Configured profiles based on functional responsibilities.
Ensured appropriate object access and field visibility.
Structured user hierarchy to reflect reporting relationships.

2) Permission Set Design
Designed modular permission sets within CRM.
Applied principle of least privilege.
Segregated access to maintain scalability and security.
Tested access behavior through role-based login validation.

3) Access and Visibility Testing
Validated CRUD permissions.
Verified page layout visibility.
Ensured backend security configuration aligns with expected system behavior across CRM and Vault components.

# Week 1 Learning Outcomes

Project A- Developed understanding of enterprise CRM governance models.
Learned how localized CRM systems operate within a global framework.
Gained exposure to transition management processes.
Improved ability to analyze operational documentation and configuration logic.

Project B - Strengthened knowledge of CRM access architecture.
Understood importance of scalable permission structuring.
Gained practical exposure to role-based system validation.
Improved backend security testing discipline within Veeva CRM environments.

# Week 2 (14-02-2026):

# Project A – CRM Commercial Operations (Deep Dive Phase)

## Overview

The second week involved deeper exposure to operational readiness activities in preparation for system takeover.

## Key Activities

1. Knowledge Transfer Workshops
Participated in structured sessions covering:

- Incident triaging
- SLA adherence
- Escalation frameworks
- Change management lifecycle
  Studied historical change request examples to understand approval dependencies and risk assessment processes.

2. Multi-Country System Mapping
Compared CRM implementations across regions.
Documented variations in:

- Call reporting mechanisms
- Validation rules
- Territory logic
- Approval routing structures
  Identified areas that may require harmonization during transition.

3. Compliance and Governance Understanding
Observed how compliance and audit trails are maintained.
Understood impact assessment processes before configuration changes.
Reviewed data governance controls and monitoring frameworks.

4. Operational Readiness Preparation
Structured transition documentation.
Identified open clarification points.
Prepared internal notes for smoother handover support.

# Project B – Veeva CRM & Vault Implementation

Overview - This week focused on backend configuration and data structuring within Veeva CRM and Vault to support system implementation.

## Key Activities

1. Data Palette Configuration
Created structured data palettes to support CRM modules.
Configured dynamic dropdown dependencies.
Ensured role-based data visibility logic.
Maintained consistent data formatting standards.

2. Backend–System Alignment
Validated field types and picklist dependencies.
Ensured mandatory field logic aligns with process requirements.
Structured objects for seamless interaction across CRM and Vault components.

3. Testing Data Flow
Tested record creation and update flows.
Validated validation rules.
Ensured data consistency across user roles.

4. Scalability Considerations
Designed modular data structures.
Avoided hardcoded configurations.
Planned structure for future enhancement and performance stability.

# Week 2 Learning Outcomes

Project A- Gained exposure to structured CRM transition management.
Improved understanding of ticket triaging and SLA handling.
Strengthened system mapping and documentation skills.
Developed awareness of governance and compliance-heavy CRM environments.

Project B - Gained hands-on experience in backend preparation within Veeva CRM and Vault.
Understood importance of structured data architecture in enterprise systems.
Improved ability to align backend configuration with process requirements.
Strengthened validation and integration testing skills.
Developed scalable thinking during early-stage system design.

# Week 3 (21-02-2026)

# Project A – CRM Commercial Operations (Transition & Shadow Phase)

## Overview

This week focused on continued transition calls and operational readiness. One country transition is nearing completion, and shadow support is about to begin.

## Key Activities

1. Continued Transition Calls
Participated in detailed transition discussions.
Clarified operational workflows and configuration dependencies.
Reviewed final handover checkpoints for one country.

2. Pre-Shadow Preparation
Prepared documentation for active shadowing phase.
Reviewed open incidents and pending change requests.
Aligned understanding of SLAs and escalation protocols.

3. Process Alignment
Ensured configuration aligns with defined business workflows.
Validated integration points between CRM and Vault components.

# Project B – Veeva CRM & Vault Enhancement Activities

## Overview

This week focused on continued refinement of CRM configuration and enhancement of implementation components.

## Key Activities

1. Configuration Refinement
Reviewed existing permission structures.
Optimized access visibility for improved governance control.

2. Learning Key CRM Functional Modules
Studied Rep Triggered Emails (RTE) configuration and workflow logic.
Understood email approval processes and tracking mechanisms.
Explored sampling management processes within Veeva CRM.

3. Sampling Implementation (Initial Stage)
Started configuring sampling functionality in Veeva CRM.
Reviewed product allocation rules and compliance considerations.
Tested sampling-related record flows in sandbox.

# Week 3 Learning Outcomes

## Project A

Gained hands-on exposure to near-live transition readiness.
Developed understanding of Rep Triggered Emails configuration logic.
Learned sampling process implementation within Veeva CRM.
Improved confidence in shadow support preparation and operational ownership.

## Project B

Strengthened configuration refinement skills within enterprise CRM systems.
Improved governance-focused system validation approach.
Enhanced understanding of CRM–Vault integration dynamics.

# Week 4 (28-02-2026):

# Project A - CRM Commercial Operations (Shadow Phase Initiation)

## Overview

This week marked the beginning of active shadowing for one country as part of the CRM transition process. Focus was on understanding live operational workflows, manual upload processes, and documenting the existing AS-IS state. Transition activities for other countries continued in parallel.

## Key Activities

1. Shadowing Sessions
Started structured shadow support for one country.
Observed end-to-end operational handling of CRM activities.
Understood real-time issue handling and workflow execution.

2. Manual Upload & Data Change Activities
Observed manual upload processes within the system.
Covered four key data change activities including validation and approval checks.
Understood data dependencies and impact on reporting structures.

3. AS-IS Documentation Preparation
Prepared detailed AS-IS document outlining current operational processes.
Documented workflows, dependencies, approval steps, and validation mechanisms.
Ensured structured representation for smoother knowledge retention and future optimization.

4. Continued Transition Support
Participated in transition calls for remaining countries.
Clarified open configuration and process-level queries.

# Project B - Veeva CRM Implementation & Configuration

## Overview

This week focused on refining access governance and exploring functional modules within Veeva CRM.

## Key Activities

1. Permission Set Enhancement
Configured additional permission sets based on evolving requirements.
Validated role-based access alignment with process needs.
Tested visibility and access control across modules.

2. Sampling Module Exploration
Further explored sampling functionality within Veeva CRM.
Reviewed sampling workflows, compliance requirements, and allocation logic.
Tested initial configuration behavior in sandbox.

# Week 4 Learning Outcomes

## Project A

Gained practical exposure to live operational shadowing.
Developed understanding of manual upload dependencies and data validation impacts.
Improved process documentation skills through AS-IS preparation.
Strengthened readiness for gradual operational ownership.

## Project B

Enhanced expertise in permission architecture refinement.
Developed a deeper understanding of sampling configuration logic.
Improved ability to align system access controls with business requirements.

# Week 5 (07-03-2026):

# Project A - CRM Commercial Operations (Transition Continuation)

## Overview

This week focused on continuing transition activities and gradually preparing for active system involvement. Efforts were directed toward understanding ongoing workflows, initiating access setup, and contributing to internal documentation and presentation materials.

### Key Activities

**1. Continued Transition Calls**
Participated in ongoing transition sessions for multiple regions.
Reviewed operational workflows and clarified process-level dependencies.
Strengthened understanding of CRM operations and transition structure.

**2. Access Initiation**
Started working towards obtaining required system access.
Understood access request processes and approval workflows.
Reviewed role-based access requirements within the CRM system.

**3. Documentation & Deck Preparation**
Worked on preparing internal presentation decks related to CRM processes.
Structured information for better understanding of workflows and configurations.

# Project B - Veeva CRM Implementation & Configuration Support

### Overview

This week involved continued exposure to CRM configuration and supporting activities related to system understanding and documentation.

### Key Activities

**1. CRM System Familiarization**
Explored system components and configuration areas.
Aligned understanding with ongoing implementation requirements.

2. **Supporting Documentation Activities**
Contributed to preparation of structured decks for internal understanding.
Reviewed configuration-related information and workflows.

# Week 5 Learning Outcomes

## Project A

- Improved understanding of transition workflows and operational dependencies.
- Gained clarity on access management processes within enterprise CRM systems.
- Enhanced ability to structure and present technical information through documentation.

## Project B

- Strengthened familiarity with CRM system components and configuration areas.
- Improved documentation and presentation skills in a technical context.

# Week 6 (14-03-2026):

## Project A – CRM Commercial Operations (Transition Expansion)

### Overview

This week involved transition activities for additional regions along with structured preparation to better understand CRM operations and workflows.

### Key Activities

**1. Transition Call for New Regions**
Attended transition session for newly onboarded regions.
Understood differences in workflows and system configurations.

**2. Structured Questionnaire Preparation**
Prepared a detailed questionnaire covering CRM processes and workflows.
Focused on areas such as access control, data handling, and operational activities.
Used questionnaires to identify gaps in understanding and clarify requirements.

## Project B – Veeva CRM Implementation & Configuration

### Overview

This week focused on hands-on configuration exposure, particularly within functional modules of Veeva CRM.

### Key Activities

**1. Sampling Module Configuration**
Worked on configuring sampling management functionality in Veeva CRM.
Understood product allocation logic and compliance requirements.
Tested sampling workflows in a sandbox environment.

## Week 6 Learning Outcomes

### Project A

- Developed a structured approach to understanding CRM processes through questionnaires.
- Gained better clarity on regional differences in CRM operations.

## Project B

- Gained hands-on experience in sampling module configuration.
- Improved understanding of functional module behavior and system workflows.

# Week 7 (21-03-2026):

# Project A - CRM Commercial Operations (System Access & Exposure)

## Overview

This week focused on gaining system access, exploring support tools, and attending overview sessions to strengthen understanding of the CRM ecosystem.

## Key Activities

**1. System Access Enablement**
Received and validated access to required CRM systems.
Verified permissions and system visibility for assigned roles.

**2. ServiceNow Exposure**
Started working with ServiceNow for handling requests and tracking issues.
Understood ticketing workflows and support processes.

**3. Veeva CRM Overview Call**
Attended a detailed overview session covering CRM architecture and modules.
Strengthened understanding of system structure and workflows.

# Project B - Veeva CRM Implementation & Configuration

## Overview

This week involved hands-on configuration work within CRM objects and customization.

## Key Activities

**1. Custom Field Configuration**
Created three custom formula fields for the Medical Inquiry object.
Implemented logic for calculated field values based on system requirements.
Tested field behavior and ensured correct output.

# Week 7 Learning Outcomes

## Project A

- Gained practical exposure to system access and enterprise support tools like ServiceNow.
- Improved understanding of CRM workflows through overview sessions.

## Project B

- Developed hands-on experience in CRM customization using formula fields.
- Strengthened understanding of object-level configuration and field logic.

# Week 8 (28-03-2026):

# Project A - CRM Commercial Operations (Shadowing & Documentation)

## Overview

This week focused on deeper shadowing of operational processes and understanding real-time system activities. Efforts were directed toward studying SOPs and documenting structured role-based frameworks for CRM operations.

## Key Activities

**1. Shadowing Operational Workflows**
Attended shadow sessions on **out-of-stock manual data loads** and **SAP-related changes**.
Observed step-by-step execution of manual updates and system dependency handling.
Understood coordination between CRM and external systems during data changes.

**2. SOP Review and Process Understanding**
Reviewed Standard Operating Procedures (SOPs) for operational activities.
Analyzed process flows, approval mechanisms, and execution steps.

**3. Roles & Responsibilities Documentation**
Created structured documentation defining **roles and responsibilities** for both internal teams and client stakeholders for one region.
Mapped responsibilities across operational workflows to improve clarity and accountability.

# Project B - Veeva CRM Implementation & Configuration

## Overview

This week focused on gaining hands-on understanding of reporting and operational communication within CRM workflows.

## Key Activities

**1. CRM Reporting**
Learned and demonstrated how to create reports in Veeva CRM.
Explored report structures, filters, and data representation techniques.

**2. Handling Ad-hoc Changes**
Understood how to manage manual changes and updates when ad-hoc requests arise.
Observed validation and execution steps for such changes.

**3. Cross-team Communication**
Learned how to effectively communicate with different teams during operational tasks.
Understood coordination between technical and business teams for issue resolution.

# Week 8 Learning Outcomes

## Project A

Gained practical exposure to real-time operational activities such as manual data loads and SAP-related changes.
Improved understanding of structured workflows through SOP analysis and role-based documentation.

## Project B

Developed skills in CRM reporting and data visualization.
Improved ability to handle ad-hoc operational changes and coordinate with cross-functional teams.

# Week 9 (04-04-2026):

## Project A - CRM Commercial Operations (Activation & Hands-on Execution)

### Overview

This week marked the transition from observation to active participation in CRM operations. Work focused on handling real-time activities, supporting country-level activation, and contributing to process improvements.

### Key Activities

#### 1. System Access & Activation Support

- Received access to CRM Production (PROD) and Sandbox (SBX) environments for multiple regions.
- Started supporting activation activities for one country, taking part in daily operational tasks.

#### 2. Out-of-Stock Data Load Operations

- Performed daily out-of-stock(OOS) manual data load activities.
- Understood end-to-end execution flow and dependency on upstream systems.

#### 3. PharmaML Manual Upload Process

- Learned and executed PharmaML-based manual upload activity, which involved complex data handling and validation steps.
- Identified challenges and improved understanding through repeated execution.

#### 4. Process Optimization & Coordination

- Aligned timelines for manual SAP changes that occur outside delivery hours.
- Coordinated with teams to ensure smooth execution despite timing constraints.

#### 5. Documentation & Process Improvement

- Updated and refined SOP and Operating Model documents based on practical learnings.
- Improved clarity and accuracy of operational documentation.

### 6. Jira & Ticket Handling

- Gained access to Jira and started working on tickets.
- Completed one ticket involving permission set assignment to multiple profiles.

# Project B - Veeva CRM Implementation & Configuration

### Overview

This week focused on hands-on implementation of automation within CRM workflows using configuration tools.

### Key Activities

#### 1. Email Automation Implementation

- Created an email template in Veeva CRM.
- Configured email trigger and flow to automatically notify managers when a lead is assigned.
- Tested the workflow to ensure correct execution and delivery.

# Week 9 Learning Outcomes

### Project A

- Gained hands-on experience in real-time CRM operations and country-level activation.
- Improved understanding of complex data processes such as PharmaML uploads and SAP dependencies.
- Developed skills in process optimization, documentation enhancement, and ticket handling.

### Project B

- Gained practical experience in CRM automation using flows and triggers.
- Improved understanding of event-driven workflows and communication processes within CRM systems.

# Week 10 (11-04-2026):

## Project A – CRM Commercial Operations (Full Capacity & Execution)

### Overview

This week marked a shift to **100% allocation on the project**, with full involvement in operational activities. Work focused on handling real-time data uploads, supporting country-specific processes, and participating in transition and training activities.

### Key Activities

**1. Full Ownership of Upload Activities**
Handled all upload activities for one region.
Processed **weekly integration files** and **monthly files with dynamic attributes**.
Successfully uploaded data into the **production environment of Veeva CRM**.

**2. Out-of-Stock Manual Uploads**
Performed **daily manual uploads** for out-of-stock products.
Ensured data accuracy and consistency across systems.

**3. Transition Activities (New Region)**
Attended a second transition call for **Switzerland**.
Understood region-specific workflows and configuration differences.

**4. Training & Knowledge Enhancement**
Participated in training sessions on **Biogenetics and GX processes**.
Gained domain-level understanding relevant to CRM operations.

**5. Offflow Activation & Testing**
Activated **Offflow process** in the sandbox environment.
Performed testing to validate workflow functionality and system behavior.

## Project B – Veeva CRM Implementation & Configuration

### Overview

Minimal focus this week due to full allocation on Project A, with primary efforts directed toward operational execution and system support.

# Week 10 Learning Outcomes

## Project A

Gained hands-on experience in managing production-level data uploads and handling dynamic datasets.
Improved understanding of region-specific CRM operations and transition processes.
Developed confidence in executing daily operational tasks independently.
Enhanced domain knowledge through training on biogenetics and GX-related processes.

## Project B

Maintained understanding of CRM configuration concepts while prioritizing operational responsibilities.
